

Polysol GE

Hardly irritant Pre-brushing Agent

Polysol GE is excellent for pre-spotting all kind of spots with perfect action both on wet-bound and grease-bound soiling.

Polysol GE is suited for coloured and white textiles and does not attack the colours.

Polysol GE is rinsed without problem during the drycleaning process.

In case of tenacious grease and pigment soil on collars, sleeve linings, trouser turn-ups and trouser pockets, **Polysol GE** has proved its especially powerful action.

Application:

Polysol GE to be used undiluted.

When spraying with water or using prespotting agents containing water like e.g. **Solves 2** or **Solves 3**, the treated areas should be covered with **Polysol GE**.

It is recommendable to avoid strong mechanical action on sensitive textiles or knitwear or fabrics made from pure wool.

In case of delicate materials like silk, linen and viscose, we recommend to try the colour fastness prior to treatment.

Do not leave sensitive goods in prespotted condition for a longer time, instead make sure that they are cleaned right away..

Storage conditions: To be stored in a cool and dry place, protected from frost.
Protect from heat and direct sunshine.
Keep containers tightly closed.

Maximum storage time: 18 months
